

SCIENCE Magic

with
Jeff Evans

Unleashing the power of science with magic!

*"The word from the children was
"this was the best assembly
EVER!" The parents, teachers and
staff all agree with the children,
you were extremely entertaining."*

-Wendy Logan, P. T. A.
Browns Point Elementary

*"I have heard nothing but the
highest praise for your show. We
do want to schedule you for next
year!"*

-Susan Peterson, teacher
East Port Orchard

*"That was the best magic show
ever! I never knew so many
things about science."*

-Nicole Strehle, student
Esquire Hills Elementary

Water takes on a life of its own and flows *up* into an empty glass. A coin defies gravity and "falls" towards the ceiling. A balloon remains balanced in space. Demonstrations like this that look like magic can be explained by science. This is the driving idea behind Jeff Evans' **Science Magic**.

Students are exposed to the characteristics of solids, liquids, and gases. The properties of air pressure, static electricity, center of mass, liquid density, and expansion and contraction are visually shown and explained. Because of the interactive nature of the show, students assist with certain parts throughout the show.

Afterwards, teachers all receive a Class Activity Sheet with additional experiments can be duplicated at in the classroom or at home. This is an easy way to transfer the excitement from the assembly back to the classroom. This program is an ideal lead-in or finale to your school Science Fair.
